ESSAY 37 LAUNCH

What If I Didn't?

Future-Proofing Course Fleets with WCAG 3.0 Cognitive Accessibility

THE CORE PROBLEM

Beyond Binary Compliance

Passing contrast ratios and alt-text checks isn't enough. When students read complex kinesiology and nutrition texts on mobile devices, dense paragraphs create heavy cognitive bottlenecks.

Accessibility is about human comprehension.

EMERGING STANDARDS

The WCAG 3.0 Shift

Moving away from rigid pass/fail checks toward holistic, outcome-based scoring that makes cognitive accessibility a first-class citizen in curriculum design.

CURRICULUM-AS-CODE

Automating Cognitive Optimization

- Built custom Python readability linters
- Automatically parsed 378 master files
- Converted dense blocks into scannable lists
- Preserved strict clinical fencing (###)
